

Portable Shockwave Therapy Device

V2U- RPW-PT 1

V2U- RPW-PT 2

How does radial shockwave therapy work?

Schematic illustration of a ballistic shockwave source
① projectile ② applicator

Radial shockwave therapy is a non-surgical technique developed for the treatment of musculoskeletal disorders. The treatment utilizes a unique set of proprietary acoustic pressure waves that are delivered through the body and focused on the site of pain or injury. It stimulates the metabolism, enhance blood circulation, accelerates the healing process. As a result, allowing damaged tissues to regenerate and recover.

System Features & Benefits

- 7.0" color touch screen
- "Plug & play" system
- Multi-preset treatment protocols
- User friendly and reliable
- No air compressor, low maintenance cost
- Easy of use

Indications

Used in the area of adjuvant therapy of chronic joint pain and muscular pain

Accessories

Technical Specifications

Technology	Compressor free ballistic radial shockwave therapy-system with electromagnetic generator as projectile accelerator
Power Levels / Energy	60 to 185 mJ (equivalent to 1-5 bar)
Frequency	1-22 Hz
Modes	4 Burst modes (continuous / 4 / 8 / 12 pulses)
Programmes	7 preset programmes, adjustable
Protocols	More than 25 illustrated preset treatment recommendations
Controls	Colour touch-screen for all software operations
Applicators	6/15/25mm
Life time	Minimum warranty of 150,000 shocks per applicator head
	Minimum warranty of 2,000,000 shocks per handpiece
Dimensions	290×240×130mm(L/W/H)
Weight	2.07kg (controller unit only)
Package	Aluminum Carrying Case
